# Mandibular Anesthesia Model

PRODUCT OVERVIEW

Model includes:
- Replacable soft silicone gingiva
- The teeth with realistic anatomy and naturally shaped roots (from 38 to 48 in lower jaw
- The jaw bone

The teeth with real anatomy

Replacable Gingiva

Jaw bone

INSTRUCTIONS FOR USE

Anesthesia training

- Practice direct/ indirect mandibular nerve block

The model allows you to check your needle tip position from the dorsal side.

- Practice infiltration nerve block
- Practice intraligamental nerve block

Replacing the Gingiva

1/ Remove all the teeth from the model by pulling the teeth out by hand or gently with forceps.

2/ Remove the silicone gingiva.

3/ Place the new silicone gingiva onto the alveolus.

4/ Reattach the teeth.

Note: If the teeth are loose and fall out, we recommend inserting a small piece of adhesive gum to the root under the tooth, e.g. "PRITT Multi-Fix Sticky Dots"

Spare parts

If you need to order spare parts, please write us at sales@biovoxel.tech or visit our web.

Feedback

If you have any questions or feedback towards further improvements of the model, please do not hesitate to contact us at info@biovoxel.tech or whatsapp.

We wish you a lot of quality training!
