3D MOLAR PUZZLE INSTRUCTIONS

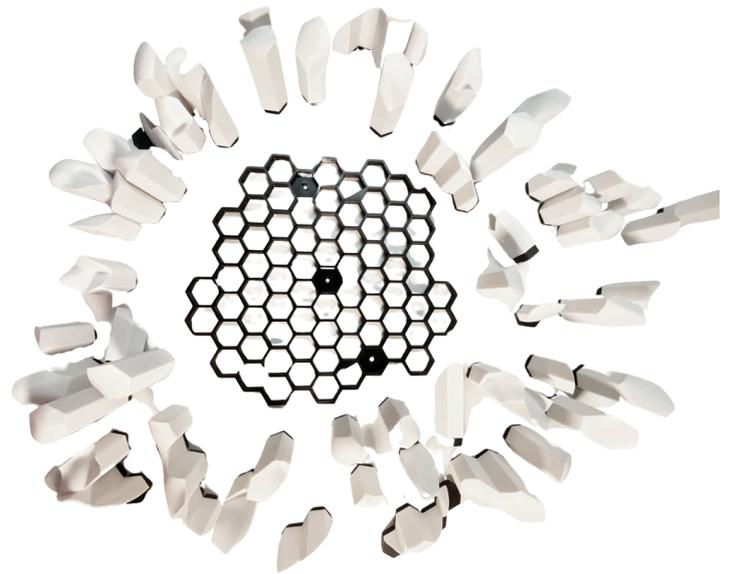

57
PCS

Puzzle Instructions

Package Contents

- Base for assembly
- 57 pcs of 3D puzzle pieces

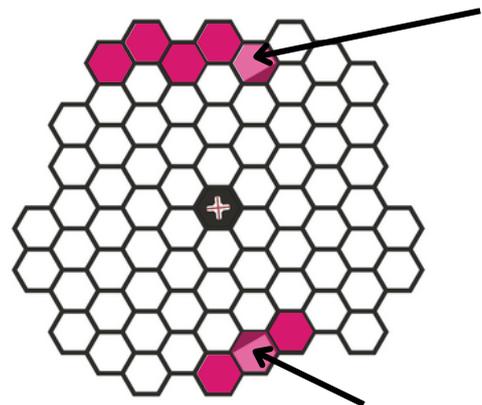

1. Starting the Assembly

- The puzzle includes two edge pieces that are unique and fit in only one specific position (see image no. 1). Start assembling the puzzle with these two pieces.
- Continue building from these edge pieces toward the center.

2. Piece Orientation

The puzzle has 3D contours that ensure each piece fits in only one correct place. Try different orientations and rotate the pieces until they create the correct relief.

Obrázok č. 1

3. Hints

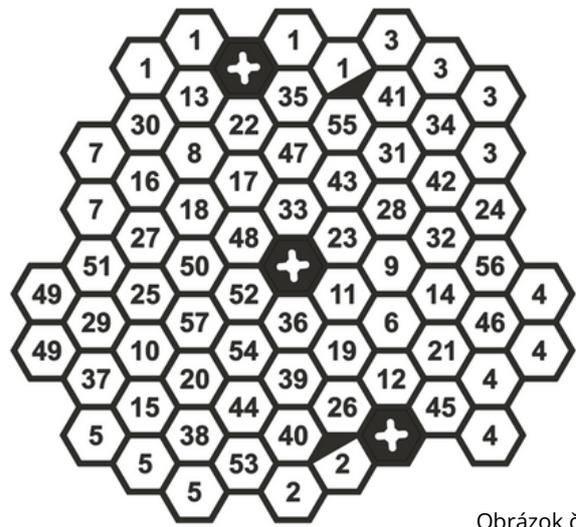

If you are unsure how to proceed, refer to image no. 2 and try placing the pieces according to the relief.

If you still need help, each puzzle piece has a number on the underside that corresponds to the guide shown in image no. 3. These numbers will help you find the correct position.

We recommend using the guide only as a last resort and not assembling the puzzle solely based on the numbered hint.

Wall Mounting the Puzzle

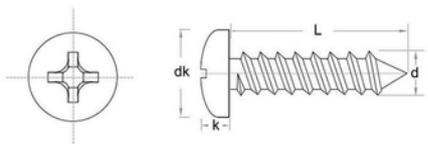

The puzzle can be mounted on the wall using one or more of the designated black mounting points (openings). These holes allow you to hang the model in any orientation.

Mounting in the Center of the Model:

1. Remove piece no. 11.
2. Place the base against the wall and precisely mark the position of the cross.
3. Use the appropriate drill bit based on your wall material and the size of the screw and wall plug (See image no. 5 for selecting the correct screw size.)
4. Drill a hole at the marked spot and insert a suitable wall plug.
5. Screw the screw into the wall plug, leaving it slightly protruding so the puzzle can be hung.
6. Hang the puzzle on the screw using the black opening and secure it by sliding the screw into the grooves (see image no. 5).
7. Make sure it is firmly secured.

Obrázok č. 4

Obrázok č. 5

$$dk \leq 8 \text{ mm}$$

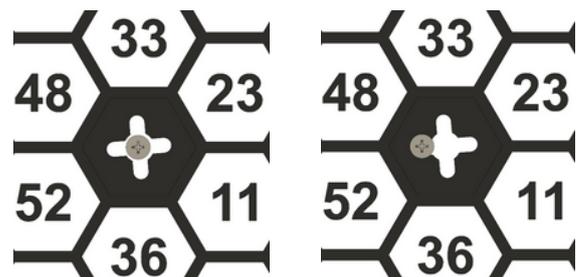

$$k \leq 5.2 \text{ mm}$$

$$d = 4 \text{ mm}$$

$$L - \text{v závislosti od steny}$$

Mounting with Multiple Screws:

To mark the positions for additional screws, remove pieces no. 1 and no. 2 and proceed in the same way as described for mounting in the center of the model.
