

# ANATOMICAL INNER EAR MODEL

Educational tool for teaching the anatomy of the vestibular system.

- This model allows demonstration and practice of maneuvers related to balance and inner ear function.
- Features cochlea with transparent semicircular canals and otoconia simulation.

## HANDLING INSTRUCTIONS

The model consists of two parts: the inner ear and the stand it is attached to. The inner ear can be detached from the stand.

### Reattaching the model:

- Hold the inner ear by the **cochlea (yellow part)**.
- Gently press it back into the stand until it is securely attached.

### Important:

- **Do not hold or press the model by the transparent part.**
- Holding the model by the transparent part may cause it to crack or break. Always handle the model by the cochlea (yellow part).
